the all-in-one verification platform that makes it easy for businesses to verify their clients. Our platform has already done the work for you, so all it takes is just one click to start verifying your clients today.

With One Click Verify, you can easily verify your clients' identity, employment, and other key information quickly and efficiently ensuring compliance with KYC & AML/CTF requirements. Simply create an account with us and follow the simple steps to complete the verification process.

Trust One Click Verify to provide accurate and reliable verification for your business in a safe, secure and fully encypted environment.

Get started now

and streamline your verification process with One Click Verify

It is free to register and set up an account

The first 10 identities you verify (transactions) are free.

DIGITAL CLIENT IDENTITY:

PROTECTING YOUR BUSINESS AND YOUR CUSTOMERS' PRIVACY

TUESDAY 31ST JAN 2023 - 3PM SOFITEL SYDNEY WENTWORTH

Learn more about the Privacy Legislation Amendment and how to protect your business and your customer

REGISTER YOUR INTEREST

Born out of the Australian Government's Operational Security Framework Requirements for ATO Digital Services, One Click Verify is a Multi-factor Identification platform that utilises several points for verification.

Security

Encrypted and secure portal

Auditing

Full audit logging

Tracking

IP address/ user and user agent

Verification

Mobile, email & photo ID verification, personal detail cross-referenced with ATO, biometrics

Identification

Supports non-traditional methods of identification, captures and stores original document signatures

AML Check

PEPs and sanctions check against global database of records

Custom API

Iress integration in place and easily add via API

Additional Features

Secure messaging service & storage and income verification

One Click Verify automates the client identity renewal process upon expiry of photo ID for the life of the User's subscription.

Capturing the original signature is important for superannuation funds, financial institutions, and the like.

So where existing verification solutions identify, the digital process breaks down when the Fund cant capture the original signature.
